

Straw Globe

Lesson: Engineering

Supplies Needed:

Straws

Tape

Steps:

Pinch the mouth of the straws to make them smaller and stuff them into another straw's end.

Do this with three straws and then connect them together to become a triangle.

Take five of the triangles and unite them together to make a pentagon.

Students will need three straw pentagons along with seven additional triangles.

Tape the pentagon's together, and as you wrap them together, connect the missing sections with the remaining triangles to complete the globe.
